

# SafetyLogic

eSolutions for Risk Control & Training

“You can’t manage what you can’t measure” is an old cliché but one that is proven time and time again in risk control. That statement is especially true for organizations that operate independently in “silos” using paper-based and/or disparate systems for risk control actions and activities.

It is estimated that identification and correction of a hazard before an accident occurs can reduce the costs associated with that hazard by 50% or more. In a recent study, hazard prevention and control was determined to provide the best cost-to-benefit ratio for safety program activities. Key to prevention and control is the ability to track all efforts to correct identified hazards.

SafetyLogic is a comprehensive and customizable suite of browser-based risk control applications to help capture, track, and report on day-to-day risk control actions and activities. SafetyLogic has proven successful in helping to reduce the costs associated with maintaining compliance, employee safety and HR training, safety management, and MSDS management. Designed for both large organizations with multiple sites and smaller companies with limited resources, in a diverse set of industry sectors.

## KEY BENEFITS

- > maintain compliance & avoid citations
- > save valuable time and lowers expenses
- > create safer working environment and improve safety culture
- > reduce risk control costs
- > improve management and sharing of data and documentation
- > low total cost of ownership & proven return on investment
- > backed by Aon Corporation with subject matter expertise and global resources

## KEY FEATURES

- > robust, flexible and easy-to-use to meet the needs of any organization
- > subscribe only to the modules you desire with a flexible pricing model
- > browser-based application requires limited or no IT involvement with no additional software needed
- > fast, easy implementations with superior ongoing service and support

## SAFETY MANAGEMENT MODULES

- Audit-inspection automation with mobile technology
- Meeting scheduling and tracking
- Action Items tracking & recording
- OSHA recordkeeping & injury-illness tracking
- Resource library, bulletins and surveys
- Roll-up reporting for data analysis

## LEARNING MANAGEMENT SYSTEM (LMS) FOR EMPLOYEE TRAINING

- **Diverse courseware** – comprehensive suite of over 500 Safety and HR Topics
- **High quality courseware** – interactive session with high quality graphics and audio
- **Administrative features** – ability to auto-assign courses, track and record employee training both online & offline training and roll-up reporting
- **Customizable** – to meet the needs of any organization with client-defined text, picture files and tests

## MSDS MANAGEMENT/CHEMICAL MANAGEMENT

- **MSDS Vault** – custom database of MSDS for each organization, pre-screening, and federal/state/international reporting
- **GateKeeper** – approval tracking, inventory management and chemical accountability
- **Regulator** – chemical inventory tracking and regulatory reporting module
- **MSDS Author** – creation of web enabled MSDS with your logo
- **REACH & Material Disclosure** – to meet all of your regulatory and international needs
